

DATA SET DESCRIPTION

Dataset for ₹1,00,000 Income:

- **Time Period:** This dataset is spread over multiple months in 2024 (from January to April).
- **Columns:**
 - **Date:** Dates of transactions (e.g., 2024-01-01, 2024-01-15, etc.).
 - **Income:** Income amount for the period, varying slightly, from ₹1,00,000 to ₹1,04,000.
 - **Expense Category:** Types of expenses such as Groceries, Rent, Utilities, Entertainment, Transportation, Healthcare, and Travel.
 - **Expense Amount:** The actual amount spent on each expense category.
 - **Fixed Expense:** Predetermined or regular expenses.
 - **Variable Expense:** Varies from month to month.
 - **Savings:** Amount saved during the period.
 - **Investment:** Amount invested.
 - **Debt Repayment:** Amount paid towards debt.

This dataset illustrates how a person with an approximate income of ₹1,00,000 to ₹1,04,000 manages various financial activities over time, balancing fixed and variable expenses with savings, investments, and debt repayments.

1-Month Dataset for ₹60,000 Income:

- **Time Period:** This dataset is for a single month in January 2024.
- **Columns:**
 - **Date:** Specific dates in January 2024 (from 2024-01-01 to 2024-01-28).
 - **Income:** Income is consistently ₹60,000 for the period.
 - **Expense Category:** Categories of expenses like Groceries, Transportation, Healthcare, Entertainment, Rent, Utilities, and Dining Out.

- **Expense Amount:** Money spent on each category.
- **Fixed Expense:** Regular expenses like rent and utilities.
- **Variable Expense:** Fluctuating expenses.
- **Savings:** Savings for the month.
- **Investment:** Investments made.
- **Debt Repayment:** Amount paid towards debt.

This dataset shows how an individual with a monthly income of ₹60,000 distributes their expenses, savings, investments, and debt repayments over a month.
